

# AGILE DEVELOPMENT FACTORY

CES Agile Development Factory (ADF) deploys quick, cost-effective, secure-by-design software solutions aligned to enterprises' specific needs using a dedicated agile team focused on developing high-quality deliverables sprint by sprint.

## CHALLENGE

From the cloud and connectivity to the constantly expanding corners of cybersecurity, businesses today are evolving faster than ever. But as companies quickly jump from one cutting-edge solution to the next, they often neglect and fail to receive further feedback from real users and customers and keep up to date with security concerns and breaches, creating vulnerabilities and gaps in workflows. As businesses continue to get flooded with more solutions and processes to keep their team secure, how can they ensure every investment is managed and employed correctly?

## SOLUTION

By utilizing CES Agile Development Factory, teams gain a software development service based on an agile, iterative approach to project management. This strategy establishes faster, customizable, secure-by-design software solutions that save time and money and are aligned to exact business needs. With ADF, organizations obtain a team committed to deploying enterprise-grade deliverables during every step until the final delivery of the finished solution.

## BENEFITS

- **Agile Methodology:** Deploy an agile methodology with defined roles, responsibilities, and meetings that stay consistent.
- **Skilled, Experienced Teams:** Access an agile-driven team committed to producing results and making advances based on real-world results (working software) rather than speculation.
- **Transparent Project Breakdowns:** Perform precise services based on mapped-out deliverables.
- **Easily Controlled Changes:** Provide clear, easy access for stakeholders when completing projects.
- **Mitigated Risks & Technical Issues:** Deploy a predictable pipeline of work.

## IN CONCLUSION

Technology and cybersecurity are evolving so rapidly that teams do not have the time to properly plan, create, and deploy solutions. With Agile Development Factory, businesses gain cost-effective, cross-functional development teams that focus on streamlining an intuitive strategy and nurturing solutions development from conception to completion.
