

SD-WAN Security Bundle

Meeting the challenge of bandwidthintensive environments. The solution aggregates all available bandwidth with an added layer of protection to prevent theft, unauthorized access and damage to data, hardware, or software.

● **Challenge**

Organizations moving applications to the cloud often find that traditional WANs are not designed for a dynamic, internet-based environment. Managing multiple connections, myriad information systems and high levels of processing power can create points of vulnerability that open the door to cyber criminals and security breaches.

As a result, businesses require networks with higher capacity, availability, and resiliency to accommodate the demands of bandwidth-intensive applications, without compromising the security of sensitive data.

The stakes are getting higher. Kaspersky Labs estimates that, for an enterprise, a single security breach costs an enterprise an average of \$1.23M – a figure that is consistently growing over time.

“BUSINESSES REQUIRE NETWORKS WITH HIGHER CAPACITY, AVAILABILITY, AND RESILIENCY TO ACCOMMODATE THE DEMANDS OF BANDWIDTH-INTENSIVE APPLICATIONS WITHOUT COMPROMISING THE SECURITY OF SENSITIVE DATA.”

The Solution

Our SD-WAN Security bundle helps businesses protect the storage and exchange of sensitive customer data with consistent, secure and stable application performance. Organizations can manage multiple links and expand their WAN's capacity in a cost-effective way that provides high network availability and business continuity.

The solution aggregates all available bandwidth with an added layer of protection to prevent theft, unauthorized access and damage to data, hardware, or software.

SD-WAN Security Bundle features:

- > Combined connectivity and network security
- > Centralized network management and end-to-end visibility
- > Consistent, secure and stable application performance
- > High network availability and business continuity
- > 24/7 proactive monitoring for network and security related incidents
- > Basic to comprehensive security features
- > A web portal that provides full visibility and management of the environment
- > Dashboards and on-demand report generation
- > 24/7 proactive monitoring for network and security-related incidents
- > Basic to comprehensive security features
- > A web portal that provides full visibility and management of your environment
- > Dashboards and on-demand report generation

Benefits

SD-WAN Security Bundle provides a level of protection traditional WANs can't match. An additional layer of security helps protect highly sensitive data, remove points of vulnerability and prevent cyber-attacks.

In addition, the solution helps businesses to save time and increase productivity by migrating from a Capex to an Opex model without significant infrastructure investment. And, cloud computing enables the flexibility of user-based pricing and seamless adaptability to business growth.

**“ AN ADDITIONAL LAYER OF SECURITY HELPS PROTECT
HIGHLY SENSITIVE DATA, REMOVE POINTS OF
VULNERABILITY AND PREVENT CYBER-ATTACKS. ”**
