# Security Awareness Training

With 34% of businesses requiring a week or more to recover their data after a cyber-attack and 91% of data breaches starting from a single employee phishing attempt, now is the time to ensure **every single team member** has the resources *AND KNOWLEDGE* to defend your data and reputation.

The average cost of a ==ransomware attack== on a business is $133,000

○ Avoid budget and brand breaking breaches with CES' Security Awareness Training (SAT).

==Data breaches increased 17%== in 2021 compared to 2020

○ Train staff using automated campaigns, simulated phishing attempts, and more using SAT's realistic attack scenarios and reporting.

There are currently ==$26B annual estimated losses to email scams==

○ Decrease cybersecurity incidents by utilizing industry-specific email simulations with SAT's extensive catalog of resources.

==46% of organizations== had at least one team member download an infected mobile application

○ Access the world's largest integrated platform for security awareness training with simulated phishing attacks with CES and KnowB4.

A record ==97.1m crypto-jacking attacks== took place in 2021

○ Equip remote and in-person staff to follow industry-specific regulatory laws and avoid sophisticated data attacks using SAT's fully automated platform.

Don't let one wrong click ruin your business.
